

INSTRUCTIONS TO AUTHORS

Aims and Scope. *Neurobiology of Aging* publishes the results of studies in behavior, biochemistry, cell biology, endocrinology, molecular biology, morphology, neurology, neuropathology, pharmacology, physiology and protein chemistry in which the primary emphasis involves mechanisms of nervous system changes with age or diseases associated with age. Only original articles will be accepted. Reviews and primary research articles are included, occasionally accompanied by open peer commentary. Letters to the Editor and brief communications are also acceptable. Brief reports of highly time-sensitive material are usually treated as rapid communications in which case editorial review is completed within six weeks and publication scheduled for the next available issue. Negative Results will be published as one journal page (3 double-spaced typed manuscript pages), with supplementary material to be posted at the journal web site.

The accepted abbreviation for *Neurobiology of Aging* for bibliographic citation is *Neurobiol. Aging*.

All new manuscripts must be submitted through the *Neurobiology of Aging* online submission and review web site (<http://ees.elsevier.com/nba/>). Authors are requested to submit all required material in electronic form to this web site. Detailed instructions and a step by step guide are provided at the web site.

Authors are referred to the following published editorial policy statements: Coleman, P.D. How old is old? *Neurobiol. Aging* 25:1;2004. Coleman, P.D.; Finch, C.E.; Joseph, J. The need for multiple time points in aging studies. *Neurobiol. Aging* 25:3–4;2004. Finch, C.E. Middle-age: An evolving frontier in gerontology. *Neurobiol. Aging* 12:1–2;1991. West, M.J. New stereological methods for counting neurons. *Neurobiol. Aging* 14:275–285;1993. West, M.J.; Coleman, P.D. How to count. *Neurobiol. Aging* 17:503;1996.

Articles will be published in English. International authors who are not fluent in the English language should seek help in the preparation of their manuscripts. Such assistance will enhance the review process and greatly reduce the time to publication, if the article is accepted.

STYLE OF MANUSCRIPT

General form. (1) Manuscripts should be typed double-spaced with wide margins. Pages should be numbered. Computer generated illustrations must be of the high quality of professional line drawings or they will not be accepted. (2) The title page should contain: title of paper; author(s); laboratory or institution of origin with city, state, zip code, and country; complete address for mailing proofs; telephone, fax number, and e-mail address (when available, the e-mail address will appear in the correspondence footnote of the published article). (3) References, footnotes, and legends for illustrations should be typed on separate pages, double spaced. (4) Illustrations should be identified with figure number and author(s) name; when necessary the top should be clearly marked. (5) Each table should be typed on a separate page and double spaced. (6) All dimensions and measurements must be specified in the metric system. Standard nomenclature, abbreviations and symbols, as specified by Royal Society Conference of Editors. Metrication in Scientific Journals, *Am. Scient.* 56:159–164;1968, should be used throughout. (7) Italics should not be used for the purpose of emphasis.

Length of paper. The Editors insist upon clear, concise statements of facts and conclusions. Regular manuscripts should be no longer than 10 printed journal pages (30 double-spaced pages, including references, figures and tables) and should include only the most essential figures and tables. Brief Communications should be restricted to eight double-spaced pages (including references, figures and tables) and should not present more than one figure and one table, or two figures, or two tables. Fragmentation of material into numerous short reports is discouraged.

Negative Results. Negative Results will be published as one journal page (3 double-spaced typed manuscript pages), with supplementary material to be posted at the journal web site. The 3 double-spaced pages should include a brief abstract, a brief introduction, a few sentences of methods, core data and discussion of the data. If room allows, an abbreviated reference list with the most critical references should also be included in these 3 double-spaces pages.

Supplementary material for the web site should include a more detailed introduction, more details of the methods, the complete reference list and any additional data. The supplementary material should be sufficient to convince the interested reader of the validity and reliability of the results. It should be made clear which material is for printing in the journal and which is supplementary material for the web site. Since the net effect of a Negative Result is to discourage repetition, the standards for acceptance as a Negative Result will be highly demanding (see Announcement “Negative results can be valuable”, *Neurobiol. Aging* 25(10):iii;2004).

Title. The title should not be longer than 85 characters, including spaces between words. Only the first word of the title should be capitalized.

Author names and affiliations. Where the family name may be ambiguous (e.g., a double name), please indicate this clearly. Present the Authors’ affiliation addresses (where the actual work was done) below the names. Indicate all affiliations with a lower-case superscript letter immediately after the Author’s name and in front of the appropriate address. Provide the full postal address of each affiliation, including the country name, and, if available, the e-mail address of each Author.

Corresponding Author. Clearly indicate who is willing to handle correspondence at all stages of refereeing and publication, also post-publication. **Ensure that telephone and fax numbers (with country and area code) are provided in addition to the e-mail address and the complete postal address.**

Present/permanent address. If an Author has moved since the work described in the article was done, or was visiting at the time, a “Present address” (or “Permanent address”) may be indicated as a footnote to that Author’s name. The address at which the Author actually did the work must be retained as the main, affiliation address. Superscript Arabic numerals are used for such footnotes.

Abstract. Each paper submitted must be accompanied by an abstract, which does not exceed 170 words and must be suitable for use by abstracting journals. References should therefore be avoided, but if essential, they must be cited in full, without reference to the reference list.

A list of from 3–12 (or more) keywords or short phrases suitable for indexing terms should be typed at the bottom of the abstract page accompanying the manuscript. These terms will be printed with the paper following the abstract.

Drugs. Proprietary (trademarked) names should be capitalized. The chemical name should precede the trade, popular name, or abbreviation of a drug the first time it occurs.

Headings. All headings should be numbered, for example, 1. Introduction, 2. Methods, 2.1. Study population, etc. Capitalize the first word only for all headings.

Footnotes. If more than one author, the corresponding author should be indicated with an asterisk. If there is more than one affiliation, use a superior letter for each one. Use superior numbers for any other footnotes to authors’ names, such as a current address. Text footnotes should not be used; the material should be incorporated into the text. Table footnotes: see *Tables* (b).

Acknowledgements. Place acknowledgements and source of funding, including information on grants received, before the references, in a separate section, and not as a footnote on the title page.

Disclosure Statement for Authors. At the end of the Acknowledgements, under a subheading “Disclosure Statement”, all authors must: (a) Disclose any actual or potential conflicts of interest including any financial, personal or other relationships with other people or organizations within three years of beginning the work submitted that could inappropriately influence (bias) their work. Examples of potential conflicts of interest which should be disclosed include employment, consultancies, stock ownership, honoraria, paid expert testimony, patent applications/registrations, and grants or other funding. **If there are no actual or potential conflicts of interest, please state this.** Should a significant conflict of interest be present, the Editors reserve the right to reject the article on that basis. Sources of funding should be noted in acknowledgements. (b) When applicable, provide statements verifying that appropriate approval and procedures were used concerning human subjects and animals.

References:

Responsibility for the accuracy of bibliographic citations lies entirely with the Authors.

Please ensure that every reference cited in the text is also present in the reference list (and vice versa). Any references cited in the abstract must be given in full. Unpublished results and personal communications are not recommended in the reference list, but may be mentioned in the text. If these references are included in the reference list they should follow the standard reference style of the journal and should include a substitution of the publication date with either “Unpublished results” or “Personal communication”. Citation of a reference as “in press” implies that the item has been accepted for publication.

Citations in the Text. All citations in the text should be referred to using Author(s) surname(s) and the year of publication:

1. *Single Author:* the Author’s surname (without initials, unless there is ambiguity) and the year of publication;
