

## Index

*Note:* Page numbers of article titles are in **boldface** type.

### A

- ABAQUS package, 253, 254, 256
- Aorta, blood flow in, cardiac MR for deciphering, 327, 328
- Aortic stenosis, prolonged systolic forces during ejection and, 352, 353
- Arrhythmia, ventricular, surgical ventricular restoration and, 368
- Arterial disease, blood flow patterns in, cardiac MR imaging to assess, 330–331
- Atrial chambers, 235
- Atrioventricular channel, 235
- Atrium, myoarchitecture of, 239

### B

- Blood flow, in aorta, cardiac MR for deciphering, 327, 328
  - intracardiac, assessment of, cardiac MRI for, 326–328
    - Doppler echocardiography in, 328
  - patterns of, in arterial disease, cardiac MR imaging to assess, 330–331
- Blood supply, remodeling of, 241
- Bundle of Bachman, 239

### C

- Cardiac cells, electrical anisotropy of, 303
- Cardiac cycle, isovolumic relaxation phase of, 348
  - phases of, 296–297
- Cardiac resynchronization therapy. See *Resynchronization therapy.*
- Cardiomyopathy, dilated, and cardiac resynchronization therapy, mechanistic
  - patient-specific modeling of, 375
  - and hypertrophic, twist of left ventricle and, 321–322

- ventricular enlargement and increased spherical shape in, 363–364
- ischemic, surgical, ventricular restoration in, 364–369
  - ventricular assist or replacement in, 369
- progression of, 379
- restrictive, versus constrictive pericarditis, twist of left ventricle in, 322

Circulatory system, development of, 241

Computational modeling, 372
 

- for bedside application, **371–378**
- in terms of partial differential equations, 372, 373

Computational models of cardiac physiology, patient-specific, 289, 290

Conduction system, cardiac, development of, 241–242

Congenital heart disease, twist of left ventricle in, 321

Coronary artery disease, torsion of left ventricle in, 321

Coronary artery plaque, 366

Coronary vessels, origin of, 241

Current sink, 304

Current source, 304

### D

Depolarization, 304

Diagnostics in cardiology, intrinsic antagonism invalidates, 285–286

Diastole, new look at, **347–360**

Diastolic dysfunction, twist of left ventricle in, 320

Differential equations, partial, computational modeling in terms of, 372, 373

- Doppler echocardiography, in assessment of intracardiac blood flow, 328
- Dyssynchrony, and resynchronization, 333–335
  - interventricular, 336
  - mechanical, measurement of, 336–340
    - displacement of tissue and, 336–338
    - strain and, 339–340
    - tissue velocity of tissue and, 338–339
  - nonresponders and, 335–340
  - or electrical, trials of, 336

## E

---

- Echocardiography, Doppler, in assessment of intracardiac blood flow, 328
  - to assess left ventricle, 320
- Ejection fraction, shape of heart and, 362
- Electrical impulse, propagation of, factors influencing, 304–312
- Esmolol, injected during cardiac surgery, 285, 286

## G

---

- Gap junctions, components of, 304
  - formation of, 304
- Growth factors, fibroblast and vascular endothelial, 241

## H

---

- Heart, adult, band structure of, 251, 252
  - double band model of, 250, 251, 255, 256
  - model of, 254–255
  - pumping ability of, 255
  - simulations of, 255
- boundary conditions of, 252
- chambers of, following flow in, **325–332**
- conical shape of, 361–363
- development of, computational models, 253
  - data analysis and, 253
  - embryonic, 247–249
  - mechanical driving forces in, physiology in phylogeny, **247–259**
- dilated, transverse orientation of fibers in, 362, 363
- embryonic, geometric parameters of, 250–252
  - spiral band model of, 253–254, 255–257
  - spiral muscle band models for, 250
  - tubular shape of, 250
- excitation schemes of, 252
- formation of, early stages of, 235–236
- function of, simulations of, 296–298
  - patient-specific, 298–299

- long wave contraction of, 252
- muscle fibers in, band architecture of, 247, 248
- muscle of, embryogenesis of, **235–245**
  - material properties of, 251, 252
- myocardial models of, patient-specific, **289–301**
- normal, electromechanical activation sequence in, **303–314**
- shape of, and ejection fraction, 362
- spatial-waves of, dynamics caused by, 255, 257
- tissues of, 235
- tubular, embryonic, 252
  - structure and function of, 236–238
- uniform contraction of, 252

- Heart failure, chronic. *See also Cardiomypopathy, ischemic.*
  - cost of, 361
  - myocardial dysfunction of, at subcellular level, 381
  - pathophysiology of, classification of, 379, 380
  - prevention of, cardiac resynchronization therapy and, 342–343
  - reclassification of, predominantly subendocardial, subepicardial, and transmural, **379–382**
  - ventricular conduction disturbances in, 333
  - with predominant subepicardial dysfunction, 380–381
  - with subendocardial dysfunction, 380
  - with transmural dysfunction, 381

- Heat, diastolic function of, noninvasive evaluation of, 269

- Helical fiber orientation, surgical ventricular restoration and, 368–369

## I

---

- Intercalated disks, cell junctions of, 303–304
- Isovolumic contraction period, electromechanical coupling within, 307

## L

---

- Law of Laplace, ventricular myocytes and, 282
- Left bundle-branch block, 333
  - altered ventricular activation sequence in, 333
  - and dyssynchrony, 333–334

## M

---

- Magnetic resonance imaging, cardiac, for deciphering blood flow in aorta, 327, 328
