

Index

Note: Page numbers of article titles are in **boldface** type.

A

- Abdomen, burst, with acute wound failure, abdominal wall defects in, 283–285
 - gunshot trauma to, staged reconstruction after, 292–293
 - wounds of, bacterial clearance in, vacuum-assisted closure and, 216–217
 - blood flow in vacuum-assisted closure, 215–216
 - granulation tissue increase with vacuum-assisted closure, 216
 - peripheral edema of, vacuum-assisted closure and, 214–215
 - treatment of, effects of vacuum-assisted closure therapy on, 214–217
 - vacuum-assisted closure for, 213–224
- Abdominal wall, anterior, anatomy of, 171
 - reconstruction of, 259–267
 - components separation for, 264
 - fascial release for, 264
 - indications for, 259
 - mesh and biomaterials for, 264–266
 - modalities for, 262
 - pedicled muscle and myocutaneous flaps for, 266–267
 - preoperative evaluation for, 259–262
 - skin and fascial grafts for, 262–264
 - techniques for, 262–267
 - tissue expansion for, 264
 - vacuum-assisted closure for, 262
- congenital defects of, 170–171
- deep fascia of, 172
- defect(s) of, acquired, 281
 - classification of, 231–232
 - closure without relaxing incisions, 242
 - complete, clean, adequate skin, 235, 236
 - contaminated adequate skin, 236
 - from complications of surgical procedures, 281–294
 - coverage and reconstruction after, 290–292
 - management protocols for, 282
 - principles of management and reconstruction in, 282–283
 - using alloplastic materials, 285–287, 288
 - in burst abdomen with acute wound failure, 283–285
 - in morbid obesity, 237
 - in recurrent incisional hernias, 287–290
 - initial assessment in, 169
 - large, components separation technique in, 244
 - partial, clean-contaminated, 233, 234–235
 - contaminated, 234, 235–236
 - reconstruction with small incisions, 243
 - vacuum-assisted closure of, clinical experiences with, 217–222
- embryology of, 170
- full-thickness defects of, vacuum-assisted closure of, 219–220, 221, 222
- function of, restoration of, 169–170
- gunshot blast injury to, muscle flap for
 - management of, 297–298, 299
- lymphatics of, 175
- musculofascial layer of, 172, 173
- musculoskeletal anatomy of, 248
- neurovascular anatomy of, 248
- partial thickness defects of, vacuum-assisted closure of, 218–221
- physiology of, 175–176
- reconstruction of, autologous versus nonautologous, 228
 - bioprosthetics in, 199–211
 - classification of defects for, 231–232
 - components separation for, 229–230
 - coordination of care for, 227
 - factors significant for, 182
 - free tissue transfer in, 231
 - recipient vessels for, 275–277
 - goals of, 226
 - immediate versus delayed, 227

local and distant flaps for, 230
 options for, 228–231
 analysis of, 227
 postoperative management of, 226, 277–278
 preoperative assessment for, 226
 primary closure/vacuum-assisted closure
 in, 228
 primary versus secondary options for, 228
 prosthetic materials, isografts, and Allo-derm
 for, 228–229
 prosthetic mesh for, 274, 277
 prosthetics in, 181–197
 history of, 182
 materials for. See *Prosthetic materials*.
 preoperative evaluation for, 182–183
 surgical planning for, 226–227
 tissue expansion for, 228, 292
 updated algorithm for, 225–240
 using latissimus dorsi muscle free flap,
 273–275, 276
 using rectus femoris musculocutaneous free
 flap, 274–275
 using vascularized tensor fascia lata and
 composite free anterolateral thigh flap,
 272–273
 with anterolateral thigh free flap, 272
 with free flaps, 269–280
 advantages of, 270
 complications of, 278
 disadvantages of, 270
 functional muscle transfer for, 270–271
 in pediatric population, 278
 indications for, 269–270
 with free tensor fascia lata flap, 271–272
 wound bed evaluation in, 226
 reconstruction using prosthetic materials, bowel
 obstruction following, 193
 cases illustrating, 194–195
 cost analysis of, 193
 extrusion following, 192
 fistula/chronic sinus tract following, 192
 hematoma following, 192
 infection as complication of, 191
 pain following, 193
 recurrence following, 192
 relative costs of, 193
 seroma following, 191–192
 reconstructive anatomy of, 176–178
 skeletal system and, 171
 skin and subcutaneous tissue of, 174–175
 structural and functional anatomy of, 169–179
 subserous and peritoneal fascia of, 172–173
 superficial fascia of, 171–172
 vascular supply and innervation of, 174–175
 Acellular human dermis, for abdominal wall recon-
 struction, 202–204
 Acellular porcine dermis, for abdominal wall recon-
 struction, 204–207

Algorithm(s), for components separation technique,
 255–256
 updated, for reconstruction of abdominal wall,
 225–240
 Allo-derm, for reconstruction of abdominal wall,
 228–229
 Alloplastic materials, complications following use of,
 abdominal wall defects as, 285–287, 288
 Arcuate line, 174
 Atrium mesh, 186

B

Bioprosthetic materials, for abdominal wall
 reconstruction, 201–207
 Bioprosthetic mesh, advantages of, 207
 current clinical use of, for abdominal wall
 reconstruction, 208–210
 disadvantages of, 207–208
 for reconstruction of anterior abdominal wall,
 264–266
 rationale for, in abdominal wall reconstruction,
 199–201
 Bioprosthetics, in reconstruction of abdominal wall,
 199–211
 Bowel obstruction, as complication of abdominal wall
 reconstruction using prosthetic materials, 193

C

Components separation technique, algorithms for,
 255–256
 at University of Pittsburgh School of Medicine,
 249–253
 clinical outcome analysis of, and update of surgical
 modifications, 247–257
 endoscopically assisted, 254
 for reconstruction of abdominal wall, 229–230
 for reconstruction of abdominal wall defects
 without relaxing incisions, 242
 for reconstruction of abdominal wall with small
 relaxing incisions, 243
 history of, 248–249
 in large defects of abdominal wall, 244
 inception and evolution of, 241–246
 lateral incisions and, 253
 modifications of, 253–254
 periumbilical perforator preservation and, 254
 results of, 254–255
 tissue expanders and, 253
 Composite free anterolateral thigh flap, and tensor
 fascia lata flap, in reconstruction of abdominal wall,
 272–273
