

Index

Note: Page numbers of article titles are in **boldface** type.

A

- Alzheimer's disease, cingulum bundle and parahippocampal gyrus in, 221
- corpus callosum and, 220
- development of biomarkers for, 215
- diffusion imaging in, future work in, 221–222
- diffusion tensor imaging in, **215–224**
- effects on white matter, 217–218
- mild cognitive impairment preceding, 215
- perforant pathway and, 221
- superior longitudinal fasciculus and, 220
- uncinate fasciculus and, 220
- white matter tracts and, 219–221
- Angiogenesis, prostate cancer and, 366, 372–374
- Appendiceal cancer, diffusion-weighted imaging in, 250, 253
- Arterial spin-labeled MR perfusion imaging, artifacts and, 323–324
 - benefits of, 315–316
 - clinical applications of, **315–338**, 324–334
 - effects of bipolar crusher gradients on, 317–319
 - for tumor evaluation, 328–334
 - in central nervous system infections, 330–331
 - in cerebral infarction, 323, 324, 325
 - in immunocompromised patients, 334, 335
 - in pediatric patients, 332
 - methods of, advantages and disadvantages of, 317
 - of extracranial perfusion, 335, 336
 - of hyperperfused masses, 329–330
 - of hypoperfused tumors, 328–329
 - of perfusion patterns in stroke, 323, 326–328
 - preparation components for, 316, 317
 - quantification versus qualification in, 321–323
 - technical considerations in, 316–323
- Avascular necrosis, diffusion-weighted imaging in, 270, 272

B

- Background body signal suppression, diffusion-weighted whole body imaging with, 197–200
- Blood flow, cerebral, in ischemic stroke, 292–293
- Bone, trauma to, diffusion-weighted imaging for assessment of, 272
- Brain mapping techniques, diffusion MR tractography and, 205–206
- Breast, dynamic contrast-enhanced MR imaging, **351–362**

- Breast cancer, detection of, with dynamic contrast-enhanced MR imaging, 353–354
 - future developments in, 359–360

C

- Central nervous system, infections of, arterial spin-labeled MR perfusion imaging in, 330–331
- Cerebral infarction, arterial spin-labeled MR perfusion imaging in, 323, 324, 325
- Cervical degenerative disease, diffusion tensor imaging in, 232–236
- Cervical spondylosis, diffusion tensor imaging in, 232–236
- Cingulum bundle, in Alzheimer's disease, 221
- Cognitive impairment, mild, diffusion imaging in, future work in, 221–222
 - preceding Alzheimer's disease, 215
- Colon cancer, diffusion-weighted imaging in, 245, 247, 256, 258, 268
- Contrast agents, administration of, for quantitative dynamic contrast-enhanced MR imaging, 285–286
 - gadolinium-based, for dynamic contrast-enhanced MR imaging of breast, 353–354
- Contrast-enhanced MR imaging, quantitative dynamic. *See Dynamic contrast-enhanced MR imaging, quantitative.*
- Corpus callosum, Alzheimer's disease and, 220

D

- Dementia, structural MR imaging in, 216
- Diffusion, as random process, 176
- Diffusion and Perfusion Imaging Evaluation for Understanding Stroke Evolution (DEFUSE) trial, 299, 301
- Diffusion anisotropy, 177
- Diffusion attenuation factor, 176
- Diffusion-encoding vector, 176–177
- Diffusion imaging, high-angular resolution, for fiber tracking, 210, 211–212
- Diffusion MR imaging, and perfusion MR imaging, in acute ischemic stroke, **291–313**
 - in stroke, 293–294
 - challenges in, 294–295, 296
- Diffusion MR tractography. *See Tractography, diffusion MR.*
- Diffusion tensor imaging, and diffusion-weighted imaging, new methods in, **175–204**

Diffusion (*continued*)

- applications in spinal cord diseases, 229–242
- data from, display of, 227–228
 - techniques and sequences for acquisition of, 228–229, 230
- diffusion-weighted imaging, and fiber tractography of spinal cord, **225–244**
- in Alzheimer's disease, **215–224**
- obtaining diffusion tensor and, 226–227
- principles of, 225–226
- tensor maps and maps of metrics and, 227
- three-dimensional fiber tractography and, 227–228, 229
- Diffusion tensor imaging tractography, routine presurgical, protocol for, 206–207, 208
- Diffusion-weighted imaging, 178–184
 - advancements in, 175
 - analysis and display of image in, 248–249
 - and diffusion tensor imaging, new methods in, **175–204**
 - basic principles of, 176
 - challenges in, 175
 - coronal, 264
 - diffusion-tensor imaging, and fiber tractography of spinal cord, **225–244**
 - for whole body metastatic disease and lymphadenopathy, **245–261**
 - high-angular resolution, 178, 183, 210, 211–212
 - in assessment of infection/osteomyelitis, 269, 270–271
 - in assessment of intervertebral discs, 270
 - in assessment of spine, 268–269
 - in assessment of trauma, 272
 - in intracranial abnormalities, 245
 - in kidney studies, 179, 180
 - in musculoskeletal radiology, **263–275**
 - for assessment of tumor response, 266–268
 - techniques of, 265
 - in tumor detection, 249–250, 251
 - influence of phase errors on spatial encoding in, 179–181, 182
 - k-space data and, 179, 181
 - multishot, spiral readout trajectory in, 189, 191, 193
 - new practical concepts for, 184–196
 - new sampling strategies to improve, 184–193
 - non-Meiboom-Gill component in fast spin-echo and, 193–196
 - of spinal cord, 226
 - of whole body, 250–254, 255
 - imaging parameters for, 248
 - in depiction of recurrent tumor, 254–255, 256, 257
 - to assess response to therapy, 256, 258
 - to predict response to therapy, 257–259
 - oncologic applications of, 245–246
 - parallel imaging in, 184–186
 - phase correction in, 186–190
 - problems with echo-planar imaging in, 182–184, 185, 189, 191–192
 - problems with motion-induced phase errors in, 178–181
 - PROPELLER technique and, 189–193
 - short-axis periodically rotated overlapping parallel lines in, 191–192
 - technical considerations in, 246–248
 - violation of Meiboom-Gill condition in fast spin-echo, 181–182, 183
- Diffusion-weighted steady-state free precession, 196–197
- Diffusion-weighted whole body imaging, with background body signal suppression, 197–200
- Dynamic contrast-enhanced MR imaging,
 - applications of, in liver, 344–346
 - basic principles of, 366–372
 - dynamic contrast enhancement in, approaches for, 367–369
 - temporal versus spatial resolution in, 369–371, 372, 373
 - high-temporal-resolution, 358–359
 - in breast cancer, 357
 - future developments in, 359–360
 - in evaluation of patients with prostate cancer, **363–383**
 - limitations of, 346–347
 - of breast, **351–362**
 - elimination of fat signal in, 353
 - enhancement kinetic analysis in, 355–357, 358
 - gadolinium-based contrast agents for, 353–354
 - image interpretation in, 355
 - magnetic field strength and, 353
 - practical limitations and quantitative analysis in, 357–358
 - principles of, 351–352
 - spatial and temporal resolution for, 352–353
 - technical parameters for, 352–354
 - of liver, acquisition in, 340–342
 - current status and future directions in, **339–349**
 - processing in, 341–344
 - pharmacokinetic parameters for, 366–367
 - quantitative, analysis of dynamic data from, 280–283
 - applications of, 278
 - approaches for data from, 278
 - baseline T₁-weighted images in, 278
 - contrast agent administration for, 285–286
 - data presentation from, 284–285
 - fundamentals of, **277–289**
 - pharmacokinetic modeling in, 281–283
 - quantitative analysis in, 280–283
 - vascular input function and, 283–284
 - visual inspection in, 280
