Distinct ON/OFF fluorescence signals from dual-responsive activatable nanoprobe allows detection of inflammation with improved contrast

Mathieu L. Viger, Guillaume Collet, Jacques Lux, Viet Anh Nguyen Huu, Monica Guma, Alexandra Foucault-Collet, Jason Olejniczak, Shivanjali Joshi-Barr, Gary S. Firestein, Adah Almutairi

PII: S0142-9612(17)30200-4

DOI: [10.1016/j.biomaterials.2017.03.042](https://doi.org/10.1016/j.biomaterials.2017.03.042)

Reference: JBMT 18012

To appear in: *Biomaterials*

Received Date: 23 November 2016

Revised Date: 21 March 2017

Accepted Date: 25 March 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.
