Increased selectivity for allylic oxidation of cyclohexene using TiO₂ modified V₂O₅/MoO₃ catalysts

Guoqiang Yang, Matthew D. Huff, Huiyuan Du, Zhibing Zhang, Yu Lei

PII: S1566-7367(17)30217-0
DOI: doi: [10.1016/j.catcom.2017.05.023](https://doi.org/10.1016/j.catcom.2017.05.023)
Reference: CATCOM 5058

To appear in: *Catalysis Communications*

Received date: 28 March 2017
Revised date: 21 May 2017
Accepted date: 22 May 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Increased Selectivity for Allylic Oxidation of Cyclohexene Using TiO_2
Modified $\text{V}_2\text{O}_5/\text{MoO}_3$ Catalysts**
