This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

1. The glass transition temperature of syrup is affected by the sugar composition
2. The addition of syrups promotes changes in the thermal properties of honey
3. In adulterated honey the glass transition temperature is affected by the type of syrup
4. DSC provides information on the presence of sugar syrup in honey
