This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

ACCEPTED MANUSCRIPT

Highlights

- Electronic nose, electronic tongue and computer vision systems technologies are reviewed;
- Last five year relevant contributions in animal source food authentication and assessment are considered;
- Most used multivariate statistical analysis and pattern recognition techniques are briefly reviewed;
- Multiple and complementary sensor data fusion strategies and its application to improve animal source food authentication and assessment have been reviewed.
