Effect of different heat-treatment times and applied shear on secondary structure, molecular weight distribution, solubility and rheological properties of pea protein isolate as investigated by capillary rheometry

Svenja M. Beck, Kai Knoerzer, Jayantha Sellahewa, M. Azad Emin, Jayashree Arcot

PII: S0260-8774(17)30111-5

DOI: [10.1016/j.jfoodeng.2017.03.016](https://doi.org/10.1016/j.jfoodeng.2017.03.016)

Reference: JFOE 8820

To appear in: *Journal of Food Engineering*

Received Date: 4 August 2016

Revised Date: 7 March 2017

Accepted Date: 20 March 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

1 Effect of Different Heat-Treatment Times and Applied Shear on Secondary Structure,
2 Molecular Weight Distribution, Solubility and Rheological Properties of Pea Protein Isolate
3 as Investigated by Capillary Rheometry
