This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Third order thermomechanically coupled laminated plate: 2D nonlinear modeling, minimal reduction, and transient/post-buckled dynamics under different thermal excitations

Eduardo Saetta and Giuseppe Rega

CONTENTS:

ABSTRACT

1. INTRODUCTION

2. UNIFIED MODELING OF A THIRD ORDER NONLINEAR LAMINATED PLATE WITH THERMOMECHANICAL COUPLING (TTC)

2.1 Configuration block

2.2 Balance block

2.3 Phenomenology block

2.4 Energy rates of the out-of-plane heat flow

2.5 Fundamental model and boundary conditions

3. DIMENSION REDUCTION OF THE FUNDAMENTAL MODEL TTC

3.1 Minimal dimension reduction for symmetric cross-ply laminates

3.2 Validation in linear free dynamics and critical buckling

4. TRANSIENT AND POST-BUCKLED DYNAMICS UNDER DIFFERENT THERMAL EXCITATIONS

4.1 Free heat exchange on the external surfaces

4.2 Temperature prescribed on the external surfaces

4.3 Heat flow prescribed on the upper surface and free heat exchange on the lower one

5. CONCLUSIONS AND FUTURE DEVELOPMENTS

APPENDIX
