ABSTRACT

Energy poverty can be understood as the inability of a household to secure socially and materially the necessitated level of energy services in the home. This condition is described as either energy or fuel poverty and it has been recognized by the EU's so called "Third Energy Package".

The work in this field has identified a number of household-level factors that influence the likelihood of experiencing domestic deprivation, with particular emphasis being placed on understanding how education levels correlates to the phenomenon. . In that perspective, and in order to study the dynamics of energy poverty in Greece, a questionnaire was prepared and distributed mainly by means of ins-situ interviews and, in exceptional cases, in remote sessions. The evidence presented in this paper is based on a comprehensive study of 762
