This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

ACCEPTED MANUSCRIPT

- We champion low complexity non-linear model design to accurately predict of building energy consumption
- Model performance is validated over real-word Intelligent Building data using time-of-day, weather data, and wifi-based occupancy input variables
- Our results validate the superiority of fuzzy and neural network by comparison with linear regression models
