Title: Experimental and numerical study of the impact of the collector roof inclination on the performance of a solar chimney power plant

Authors: Ahmed Ayadi, Zied Driss, Abdallah Bouabidi, Mohamed Salah Abid

PII: S0378-7788(16)30862-3
DOI: <http://dx.doi.org/doi:10.1016/j.enbuild.2017.01.047>
Reference: ENB 7322

To appear in: *ENB*

Received date: 18-9-2016
Revised date: 8-12-2016
Accepted date: 13-1-2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- The collector roof angle is an important parameter for the optimization of the SCPP
- The velocity can be raised by 125 % within the SCPP for a variation of $\Delta\theta=2.5^\circ$
- Computational results are validated using our experimental data
