This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Time-Averaged Ventilation for optimized control of Variable-Air-Volume systems

The authors are (in order):

Soazig Kaam(1), Paul Raftery (1)(*), Hwakong Chen (2), Gwelen Paliaga (3)

1 Highlights

- We developed a control sequence that alternates each zone VAV damper between open and closed.
- We tested it in a Variable Air Volume system building with single-max control logic and high minimum flow rates.
