Modeling strain-path changes in aluminum and steel

Jisheng Qin , Bjørn Holmedal , Kai Zhang , Odd Sture Hopperstad

PII: S0020-7683(17)30150-6  
DOI: [10.1016/j.ijsolstr.2017.03.032](https://doi.org/10.1016/j.ijsolstr.2017.03.032)  
Reference: SAS 9521

To appear in: *International Journal of Solids and Structures*

Received date: 13 November 2016  
Revised date: 28 March 2017  
Accepted date: 30 March 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights:**

- Transients occurring due to strain path changes in aluminum and steel are modelled.
- The HAH model is modified to properly capture strain path changes in aluminum.
- Model formulations in strain rate versus stress space are discussed.
