This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Analysis of the promotion of onshore wind energy in the EU: feed-in tariff or renewable portfolio standard?

Highlights:

An empirical evaluation of FIT and RPS in onshore wind energy is developed in the EU-28 ► FIT policies have significant impacts in terms of onshore wind installed capacity ► Contract duration and tariffs are essential concepts in successful FIT policies ► An exhaustive revision of the design elements in RPS is required in this technology
