This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

- **Three harvests were obtained per year for five sweet sorghum varieties:**
 - First cut
 - First ratoon
 - Second ratoon

Simultaneous
sugar
extraction
& fermentation
to ethanol of
sweet sorghum
stalk particles

- The **Top 76-6** variety gave the highest fresh stalk biomass, sugar and ethanol productivities
