This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

The main highlights of the research are:

- Defining the most economically suitable and sustainable standalone power supply system for a remote town in Western Australia.
- Analyzing the cash flow for the proposed system and comparing it with the one of the existing system over the project life,
- Considering the impact of uncertainties and load growth on the results for the selected system.
