Design and Optimization of a High-Temperature Cavity Receiver for a Solar Energy Cascade Utilization System

Zou Chongzhe, Zhang Yanping, Quentin Falcoz, Pierre Neveu, Zhang Cheng, Shu Weicheng, Huang Shuhong

PII: S0960-1481(16)31013-8
DOI: 10.1016/j.renene.2016.11.044
Reference: RENE 8318
To appear in: *Renewable Energy*
Received Date: 26 March 2016
Revised Date: 10 August 2016
Accepted Date: 17 November 2016

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

- Comprehensive heat transfer analysis of solar receiver cavity
- Local maximum thermal efficiency achieved with minimum receiver aperture
- Local maximum thermal efficiency achieved with minimum cavity diameter
- Global maximum thermal efficiency achieved with specific number of helical coils
