

Accepted Manuscript

Bioconversion of pretreated sugarcane bagasse using enzymatic and acid followed by enzymatic hydrolysis approaches for bioethanol production

Harshvadan Patel, Digantkumar Chapla, Amita Shah

PII: S0960-1481(17)30250-1
DOI: 10.1016/j.renene.2017.03.057
Reference: RENE 8650
To appear in: *Renewable Energy*
Received Date: 02 March 2016
Revised Date: 23 February 2017
Accepted Date: 18 March 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

- Saccharification of SB by enzymatic and acid followed by enzymatic hydrolysis.
- In-house produced hemicellulases increased efficiency of commercial cellulase
- Enzymatic hydrolysis of ammonia treated SB is advantageous over selective fractionation
- Higher ethanol yield was obtained using enzymatic hydrolysis over selective fractionation
