This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

HIGHLIGHTS

- Hydrated lime used as a cementitious material
- Stabilization of demolition materials in pavement bases
- Strength development, resilient modulus and geotechnical testing.
- Lime stabilized demolition materials suitable for road construction applications.
