This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Performance-based methods for masonry building rehabilitation using innovative leaching and hygrothermal risk analyses

Highlights:

- Design and selection of retrofitting solutions through performance-based methods;
- Potential degradation causes: high indoor RH and leaching phenomenon of the mortar joints;
- The objective was to propose optimal solutions for the preservation of a convent building.
- Innovative leaching and hygrothermal risk analyses enable proper solutions.
