<b>Article type</b>	Research Paper

### Abstract

Object: The object of this study is to determine the roles of psychiatry nurses within the therapeutic environment of psychiatry clinics in Turkey. Methods: This study was performed in a cross-sectional and descriptive design in 195 institutes comprising psychiatry clinics in Turkey. Results: When the responsibilities of nurses for clinical activities were asked, the following answers were obtained: *playing with patients or painting* at a rate of 54,4%. It was determined that in the majority of psychiatry clinics, there were educational activities which were conducted by nurses. Conclusion: The researchers propose that the increase in the roles and responsibilities of nurses in such activities be supported.
