Highlights

- There was definite stress and time constraint was visible
- There were reports of discontinuation of earlier held jobs
- Coping was well despite the problems reflected in liking and respect from others
- Secondary social support from family, friends, and neighbors was mixed
- More often resorted avenues were religious and spirituality

Abstract

Children with autism (CWA) is a segment of population in North East India who are marginalized due to lack of resources like skilled manpower and perceived stress. In comparison to other states and countries whether these children are unique in terms of care and rehabilitation from adult caregivers was the focus of our study. The study assessed level
