Low-frequency oscillations in default mode subnetworks are associated with episodic memory impairments in Alzheimer's disease

Michele Veldsman, Natalia Egorova, Baljeet Singh, Dan Mungas, Charles DeCarli, Amy Brodtmann

PII: S0197-4580(17)30254-3

DOI: [10.1016/j.neurobiolaging.2017.07.011](https://doi.org/10.1016/j.neurobiolaging.2017.07.011)

Reference: NBA 9989

To appear in: *Neurobiology of Aging*

Received Date: 8 February 2017

Revised Date: 25 July 2017

Accepted Date: 29 July 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.
