This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

The effects of autonomy support on salivary alpha-amylase: The role of individual differences

Vanda Sieber

University of Zurich

Julia Schüler

University of Konstanz

Mirko Wegner

University of Bern

1. Highlights

- Autonomy affects salivary alpha-amylase (sAA)
- Autonomy support was experimentally induced
- An autonomy disposition moderates the effect of autonomy support on sAA
- A mismatch between the autonomy disposition and autonomy support led to elevated sAA
