This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Persuasive Computing:

Feeling Peer Pressure from Multiple Computer Agents

Research Highlights:

- Sharing the same cues with computer agents led to group identification.
- Group identification with computer agents predicted social presence.
- Computer users could conform to multiple computer agents' group norms.
- Conformity to computer agents depended on their experience of social presence.
- Users' trust in computer agents depended on their experience of social presence.
