This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

- In this study, we investigate the relationship between cultural capital, techno-capital and networking skills among college students.
- Techno-competency, which refers to operational and critical literacy skills in engaging with digital technology, is positively related to networking skills, or the ability to make connections and appropriate them for one's benefit.
- Engaging in digital content production has a positive influence on networking skills among college students.
- Socialization into diverse cultural genres from an early age can contribute to networking skills among college students.
- This study points to one possible mechanism by which techno-capital may have a positive effect on upward social mobility for disadvantaged students.
