This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Exploration of action sequences in data streams of complex tasks in a digital setting

Visualising dominant paths in the network yield useful process information

Paths can be interpreted as components in measurement models of target latent traits

Method has implications for large scale analysis of performance on complex tasks
