**Vitae**

L Robertson is a professional engineer with a range of interests, including researching the level and causes of vulnerability that common technologies incur for the individual end-users.

Dr Katina Michael, SMIEEE, is a professor in the School of Information Systems and Technology at the University of Wollongong. Since 2008 she has been a board member of the Australian Privacy Foundation, and until recently was the Vice-Chair. Michael researches on the socio-ethical implications of emerging technologies. She has written and edited six books, guest edited numerous special issue journals on themes related to radio-frequency identification (RFID) tags, supply chain management, location-based services, innovation and surveillance/uberveillance

Albert Munoz is a Lecturer in the School of Management, Operations and Marketing, at the Faculty of Business at the University of Wollongong. Albert holds a PhD in Supply Chain Management from the University of Wollongong. His research interests centre on experimentation with systems under uncertain conditions, typically using discrete event and system dynamics simulations of manufacturing systems and supply chains.
