This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- We propose a novel hybrid method for feature selection using Differential Evolution for EEG signals.
- The proposed method achieved feature reduction by 90% and average classification accuracy of 95%.
- Evaluation of the proposed scheme was performed on BCI Competition III, dataset Iva.
- Results demonstrated promising performance compared with other evolutionary algorithms.
