Minimizing makespan for the distributed hybrid flowshop scheduling problem with multiprocessor tasks

Kuo-Ching Ying , Shih-Wei Lin

PII: S0957-4174(17)30637-1
DOI: [10.1016/j.eswa.2017.09.032](https://doi.org/10.1016/j.eswa.2017.09.032)
Reference: ESWA 11553

To appear in: *Expert Systems With Applications*

Received date: 20 June 2016
Revised date: 8 September 2017
Accepted date: 12 September 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- This paper is the first research to solve the distributed hybrid flowshop scheduling problem.
- The proposed SIG algorithm provides a practical means of solving this problem.
- This study contributes significantly to expand the research on distributed scheduling problems
