This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- An image denoising feedback framework using split Bregman method is proposed.
- A feedback function is used in an iterative manner to minimize the error.
- In the denoising process, the proposed method preserves edges affected by the noise.
- The proposed method is tested on both color and range images.
