This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Automatic detection of multiple motivations behind cQA questions.
- Five different multi-label algorithms were combined with 14 base classifiers.
- Each combination was built on assorted linguistically-motivated features.
- We discover some linguistic traits signalling the confluence of some motivations.
