Joint Detection and Clinical Score Prediction in Parkinson's Disease
via Multi-modal Sparse Learning

Haijun Lei , Zhongwei Huang , Jian Zhang , Zhang Yang ,
Ee-Leng Tan , Feng Zhou , Baiying Lei

PII: S0957-4174(17)30192-6
DOI: [10.1016/j.eswa.2017.03.038](https://doi.org/10.1016/j.eswa.2017.03.038)
Reference: ESWA 11196

To appear in: *Expert Systems With Applications*

Received date: 16 November 2016
Revised date: 17 March 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights:

- A novel framework for joint PD detection and clinical score prediction is proposed.
- A effective feature selection method for PD detection and prediction is proposed.
- Multi-modal neuroimaging data enhances performance of PD detection.
