This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- New system is used to acquire mid-infrared spectra from urine samples
- New PLSDA-based classifiers are designed for automatic bladder cancer detection
- The best classifier allows for automatic detection of bladder cancer with an accuracy of 82.35%
- A minimally invasive medical device with a high potential for screening and follow-up is envisioned
