This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- The classifier for each label consists of a label-specific part and a shared one.
- The label-specific part characterizes the corresponding label.
- The shared part represents the information shared by all labels.
- Intrinsic label correlations are represented by label-specific parts.
- The proposed method extends SVM to the multi-label setting.
