A Hybrid Approach for Improving Unsupervised Fault Detection for Robotic Systems

Eliahu Khalastchi , Meir Kalech , Lior Rokach

PII: S0957-4174(17)30221-X
DOI: [10.1016/j.eswa.2017.03.058](https://doi.org/10.1016/j.eswa.2017.03.058)
Reference: ESWA 11216

To appear in: *Expert Systems With Applications*

Received date: 24 December 2016
Revised date: 3 March 2017
Accepted date: 25 March 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- From unsupervised to supervised learning a fault detection model (for robots)
- Insights to why and when it becomes more accurate
- Theoretical analysis & a prediction tool
- Empirical results on 3 real-world domains that back these insights
