This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights:

- Semi-supervised Support Vector Machines for reject inference are proposed.
- The method uses information of both the accepted and rejected applicants.
- The method deals with labelled and unlabelled classes of the outcome.
- The model is tested on real consumer loans with a low acceptance rate.
- Predictive accuracy is improved by the new model compared to traditional methods.
