This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Imitating human micromanagement skills from a massive number of game cases
- The influence map was adopted to analyze the influence of units spatially
- Imitation learning with a very large number of cases (up to 500,000 cases)
- Imitation learning responds in real-time, with a high winning percentage
- Outperforming competitive entries from StarCraft competitions for combat situations
