This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

ACCEPTED MANUSCRIPT

Highlights

- Data mining methods for extracting knowledge from multi-objective optimization are reviewed.
- Methods are classified based on the type and form of knowledge generated.
- Descriptive statistics, visual data mining and machine learning methods are discussed.
- Limitations of existing methods are discussed.
- A generic framework for knowledge-driven optimization is proposed.
