Affective Parameter Shaping in User Experience Prospect Evaluation
Based on Hierarchical Bayesian Estimation

Feng Zhou , Baiying Lei , Yitao Liu , Roger Jianxin Jiao

PII: S0957-4174(17)30081-7
DOI: [10.1016/j.eswa.2017.02.003](https://doi.org/10.1016/j.eswa.2017.02.003)
Reference: ESWA 11110

To appear in: *Expert Systems With Applications*

Received date: 8 July 2016
Revised date: 5 January 2017
Accepted date: 2 February 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- The cumulative prospect theory quantitatively fulfills user experience evaluation
- We study the influence of affective states through shaping affective parameters
- We develop a hierarchical Bayesian model via Markov chain Monte Carlo technique
- We demonstrate the proposed method via a aircraft cabin interior design.
