This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A new framework is proposed to understand the activity patterns and relations.
- A new similarity function is proposed to estimate the relationships among events.
- The new model is proposed to estimate the importance of the features.
- Over-training in the model is prevented by using the LASSO regularization.
- The government can control the terrorist behaviors using the intelligent framework.
