Hierarchical Task Network Planning with Common-Sense Reasoning
for Multiple-People Behaviour Analysis

Maria J. Santofimia, Jesus Martinez-del-Rincon, Xin Hong,
Huiyu Zhou, Paul Miller, David Villa, Juan C. Lopez

PII: S0957-4174(16)30522-X
DOI: [10.1016/j.eswa.2016.09.038](https://doi.org/10.1016/j.eswa.2016.09.038)
Reference: ESWA 10902

To appear in: *Expert Systems With Applications*

Received date: 17 February 2016
Revised date: 26 September 2016
Accepted date: 27 September 2016

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A distributed-commonsensical approach for human activity recognition is proposed.
- The approach relies on video and sensor analysis enriched with common sense.
- Sequences of spatio-temporal actions are interpreted as causal explanations.
- Parallel causal explanations are tracked although just one is eventually considered.
