This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A logic programming approach personalizing taxonomies fully automatically
- Framework combines recommendation techniques with taxonomy modifications
- Proposed Method reduces the taxonomy overload but does not restrict the domain
- Suggested knowledge base is applicable on recent electronic catalog applications
- Approach is evaluated against two public databases and one private database
