This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

## Highlights

- We analyzed over 33,000 financial operations involving an Italian factoring company
- We present network construction techniques based on different risk factors
- Social network metrics are an important addition to anti-money laundering
- Cluster analysis on tacit link networks can help identify suspicious actors
- Our models and metrics are easy to replicate and to integrate into existing systems
