This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- We study interval-valued fuzzy relations for the Generalized Modus Ponens.
- We study the composition of these relations using interval aggregation functions.
- We study the properties of these compositions.
- We develop an inference method using interval-valued fuzzy relations.
- We present an illustrative example.
