This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- Distributedly moving data processing, storing and security at the network edge.
- Integration of sticky policies enforcement framework within an IoT middleware.
- Edge computing and sticky policies are used for managing access to IoT resources.
- Reducing latency, producing faster responses to end-users, improving scalability.
- Increasing robustness by removing single points of failure in the network.
