This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A new characterisation of the cube of opposition in the Boolean case.
- A overview of two systems of possibility theory set-functions for fuzzy events (with two new ones).
- The connection with the issue of qualified statements in fuzzy set theory.
- A new framework for the graded squares and cubes of opposition.
- Their interpretation in terms of possibilistic set functions for fuzzy events.
