This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Review paper assesses the possibilities and pitfalls around the digitization of the chemical senses.
- Possibilities include delivery of ambient fragrance, digital flavour experiences.
- We highlight how the majority of the attempts at successful commercialization have failed, often in the face of consumer ambivalence over the perceived benefits/utility.
- Ultimately, we suggest that mixed reality solutions are currently the most plausible as far as delivering (or rather modulating) flavour experiences digitally is concerned.
- The identify key problems with digital fragrance delivery related to attention and attribution (i.e., being aware of stimulation and believing that it is doing the work).
- We conclude with an outlook on digitizing the chemical senses.
